BET365 Stadium, Stoke City FC

Project:
BET365 Stadium, Stoke City FC

Contractor:
Andrew Scott Ltd

Architect:

Value:
£1mm

Location:
Stoke

Client:
Stoke City FC

We was delighted to have been appointed the cladding package on the stadium expansion works at the BET 365 Stadium for Stoke City Football Club. Working with Andrew Scott Ltd we completed the cladding to the new SE corner infill which created an extra 1,800 seats. We also completed the cladding to a new wheelchair platform to create extra disabled facilities in the NE corner and a new digital media building in the NW corner. In addition to the cladding we installed a new siphonic drainage system and mansafe lines/walkways to the roofs.

Works were completed within a tight programme during the summer to ensure works didnt interupt the football season.
